

# Scale the Universe

**Exploring your Universe from  
Inner to Outer Space**

**Linda L. Smith**

**NASA Astrophysics Educator Ambassador**

**[lsmith@paulsboro.k12.nj.us](mailto:lsmith@paulsboro.k12.nj.us)**

# The Booklet

- This book is organized into 3-stand-alone sections:
  - A:
    - A1: Orders of Magnitude
    - A2: Unit Analysis
  - B:
    - B1: Ordering Distance – Sticky (**What we will do!**) and Cutout
    - B2: Using a Log Scale
  - C:
    - C1: Scale the Universe (1)
    - C2: Scale the Universe (2)
    - C3: Scale the Universe (3)
    - C4: Proportional Thinking
    - C5: Ordering Time

# What is GLAST?

- GLAST: Gamma-Ray Large Area Space Telescope
- Planned for launch in Feb '08
- GLAST has two instruments:
  - Large Area Telescope (LAT)
  - GLAST Burst Monitor (GBM)
- GLAST will look at many different objects within the energy range of 10keV to 300GeV.

# What is GLAST?

- 1<sup>st</sup> ever collaboration between the BIG (Astrophysics) and the small (Particle Physicists)
  - NASA & DOE
- By studying the largest most energetic things in the Universe (GRB's), answers to the smallest subatomic particle/energy relationships are hoped for.

# Electromagnetic Spectrum

**Radio Waves**

**Microwaves**

**Visible Light Waves**

**Infrared Waves**

**Gamma Ray Waves**

**Ultraviolet Waves**

**X-Ray Waves**

# How Do We Know

- Radio waves are energy that has long wavelengths and small frequencies.
- They are the kind of energy we attach radio signals to broadcast them.
- Stars and gasses in space also emit radio waves

# How Do We Know

- Microwaves are about the size of a honeybee
- They make water molecules go nuts
- Microwave ovens and cell phone towers use microwaves

# How Do We Know

- Infrared energy is used in heat lamps
- Since infrared energy waves are longer, they are easily absorbed into molecules, heating them up, like our french fries at MacDonald's
- The dust between the stars also gives off infrared energy

# How Do We Know

- Medium range light is called Visible Light
- Visible light is the kind of energy that bounces off of me, into your eyes, and allows you to see me.
- Anything you can see with your eyes is in the visible light range

# How Do We Know

- Ultraviolet wavelengths are very small. That makes their frequencies very high.
- A lot of waves can fit in a space, so they have a lot of energy
- The sun and other stars produce ultraviolet energy

# How Do We Know

- X-rays are even smaller than Ultraviolet waves, so they have even more energy than ultraviolet rays
- Doctors use x-rays to look at your bones.
- Hot gases in space also emit x-rays

# How Do We Know

- Gamma rays are even smaller than x-rays. They have even more energy.
- Radioactive materials, and particle accelerators make gamma rays
- The biggest producer of gamma rays is our universe

# What is GLAST?

- 1<sup>st</sup> ever pair conversion telescope
  - Gamma rays are produced in the annihilation of electron-positron pairs as dictated by relativity.
  - The GBM operated on a backwards principle;
    - Turns gamma rays into electron-positron pairs that CAN be traced.

# EM Spectrum

- Seven volunteers
  - Place the EM Spectrum stickers in order from smallest to largest wavelength
  - Review order and include specific sizes.

# THE ELECTROMAGNETIC SPECTRUM

Penetrates  
Earth  
Atmosphere?

Wavelength  
(meters)

About the size of...

Frequency  
(Hz)

Temperature  
of bodies emitting  
the wavelength  
(K)

# Smallest to Largest

- 
- Name the smallest things that you can think of...
  - What are some of the largest things you can think of?
  - What about the most distant object?

# Distance Tabs

- 
- On your desk there should be one or more pieces of colored paper.
  - In colored groups - place these in order from smallest to largest.
    - Small on left, large on right.

# Distance Tabs

- 
- A red ruler with white markings and numbers from 1 to 20, positioned horizontally across the top of the slide.
- As with the EM Spectrum stickers...
    - One group places their list on the wall by the EM stickers.
    - Report and record
    - Each group reviews and edits
    - Another group edits the 1<sup>st</sup> group's order
    - Discussion & review

# The Small Scale

Radius Of  
A Proton

Radius of  
Hydrogen Atom

Radius of Nucleus of Gold Atom

Width of  
DNA Helix

Length of  
Average Virus

Length of  
average  
Bacterium

# The Small Scale

- 
- Six volunteers please
  - Arrange the yellow papers from smallest to largest.

# The Small Scale

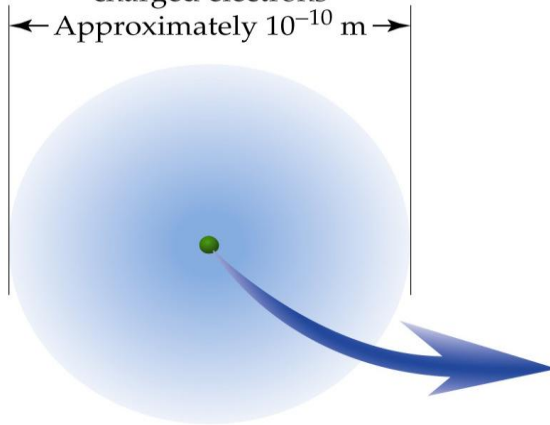

- Radius of Proton
- (nucleus of hydrogen atom)
- $8.7 \times 10^{-16}$  m (.0000000000000000087 m)

# The Small Scale

- Radius of Nucleus of Gold Atom
- $7 \times 10^{-15}$  m (.0000000000000007 m)

Volume occupied by negatively charged electrons  
← Approximately  $10^{-10}$  m →

# The Small Scale

- Radius of Hydrogen Atom
- $5.29 \times 10^{-11}$  m (.00000000000529 m)

# The Small Scale

## Width of DNA Helix

$2 \times 10^{-9}$  m (.000000002 m)

# The Small Scale

Length of Average Virus  
 $7.5 \times 10^{-8} \text{ m}$  (.0000000075 m)

Rhinovirus 16  
 PDB\_ID: 1AYM

Hadfield, A. T., Lee, W. M.,

 GRASP images by Jean-Yves Sire ©2001

# The Small Scale

- Length of average Bacterium
- $2 \times 10^{-6}$  m (.000002 m)

# Small Objects...

- 
- A red ruler with white markings and numbers from 1 to 20 is positioned horizontally across the top of the slide, below the title. The ruler is slightly blurred and has a soft glow.
- What was the most interesting thing that you found while lining up the small scale distance tabs?
  - What do you think students would have the greatest difficulty with here?
  - Sometimes I use the human scale first, as a matter of perspective.

# The Human Scale (1)

**Width of a human hair**

**Radius of Pin Head**

**Basketball Court**

**One Inch**

**One Foot**

**Height of "Average" Human**

# The Human Scale (2)

**Distance  
Sound Travels  
in one second**

(Thunder follows lightning one  
mile away by 5 seconds)

**Altitude of  
GLAST Orbit**

**Football Field**

**One Mile**

**Mount Everest  
World's tallest  
mountain**

# The Human Scale

- 
- A red ruler with white markings and numbers from 1 to 20, positioned horizontally across the top of the slide.
- 11 volunteers please
  - Arrange the blue papers from smallest to largest.

# The Human Scale

- Width of Human Hair
- $6 \times 10^{-5}$  m (.00006 m)

# The Human Scale

- Radius of Pin Head
- $9 \times 10^{-4}$  m (.0009 m)

# The Human Scale

- One Inch
- $2.54 \times 10^{-2} \text{ m}$  (.0254 m)

# The Human Scale

- One Foot
- $3.05 \times 10^{-1}$  m (.305 m)

# The Human Scale

Height of “Average” Human  
 $1.7 \times 10^0$  m (1.7 m)

# The Human Scale

- Basketball Court
- $2.56 \times 10^1$  m (25.6 m)

# The Human Scale

- Football Field
- $9.15 \times 10^1$  m (91.5 m)

# The Human Scale

- Distance Sound Travels in one second.
- Thunder follows lightning one mile away by 5 seconds.
- $3.43 \times 10^2$  m (343 m)

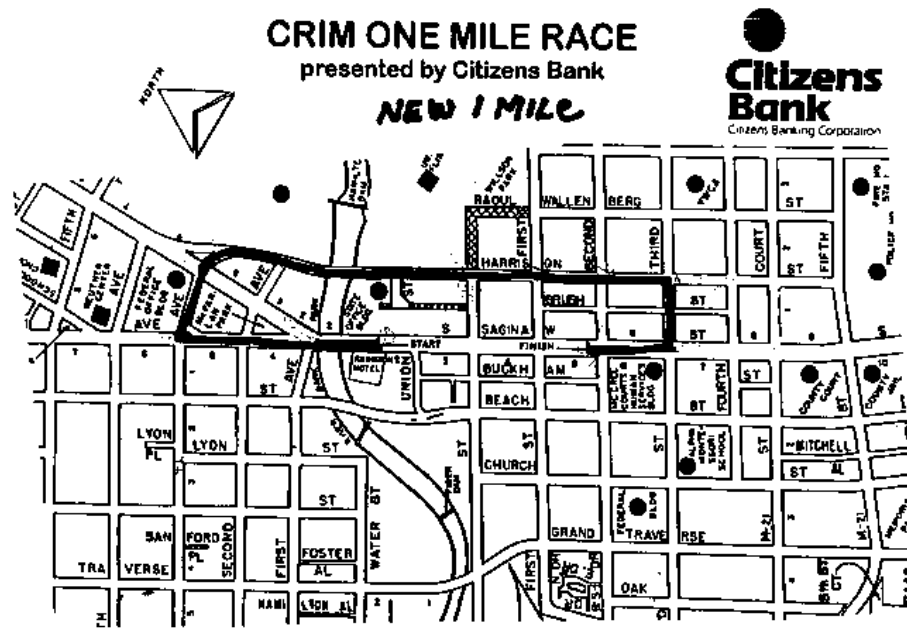

# The Human Scale

- One Mile
- $1.61 \times 10^3$  m (1610 m)

The Crim Festival of Races is supported in part by The Flint Journal and Health Plus.

# The Human Scale

Mount Everest, Earth's Tallest Mountain  
 $8.85 \times 10^3$  m (8850 m)

# The Human Scale

- Altitude of GLAST Orbit
- $5.5 \times 10^5$  m (550,000 m)

# The Human Scale...

Any surprises?

# Solar System & Nearby Stars

Radius of our Moon

Radius of the Earth

Radius of Jupiter

Radius of the Sun

Radius of Moon's Orbit

# Solar System & Nearby Stars (2)

**Distance from the Earth to Pluto**

**Distance to Sirius (the Dog Star)  
Brightest star in our night sky**

**HD70642  
(A sun-like star with a Jupiter-like planet.)**

**Radius of Oort Cloud (from the Sun to the outer edge of our solar system)**

**Distance from the Earth to the Sun (1 AU)**

# Solar System & Nearby Stars

- 10 volunteers please
- Arrange the green papers from smallest to largest.

# Solar System & Nearby Stars

Radius of our Moon  
 $1.74 \times 10^6$  m (1,740,000 m)

# Solar System & Nearby Stars

## Radius of the Earth

$6.38 \times 10^6 \text{ m}$  (6,380,000 m)

# Solar System & Nearby Stars

## Radius of Jupiter

$7.15 \times 10^7$  m (71,500,000 m)

# Solar System & Nearby Stars

Radius of Moon's Orbit  
(average distance from Earth)  
 $3.84 \times 10^8$  m (384,000,000 m)

# Solar System & Nearby Stars

## Radius of the Sun

$6.95 \times 10^8$  m (695,000,000 m)

# Solar System & Nearby Stars

Earth's Orbital Radius = 1 AU  
 $1.5 \times 10^{11}$  m (150,000,000,000 m)

# Solar System & Nearby Stars

## Pluto's Orbital Radius

$5.9 \times 10^{12}$  m (5,900,000,000,000 m)

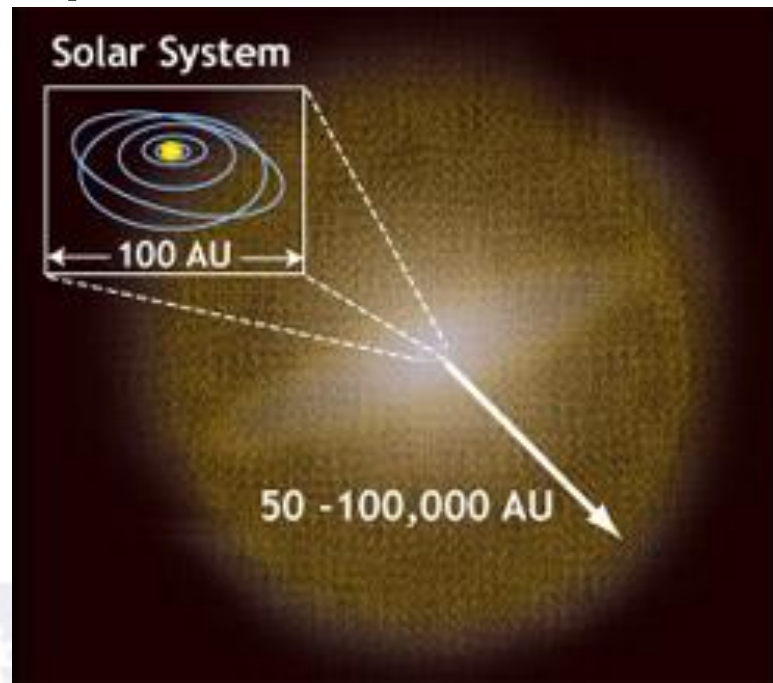

# Solar System & Nearby Stars

- Radius of the Oort Cloud

- Objects within this limit still orbit our Sun

$1.5 \times 10^{16}$  m (15,000,000,000,000,000 m)

# Solar System & Nearby Stars

- **Distance to Sirius (the Dog Star)**
- **Brightest star in our night sky**

**$8.6 \times 10^{16}$  m (86,000,000,000,000,000 m)**

# Solar System & Nearby Stars

Distance to HD70642

(A sun-like star with a Jupiter-like planet.)

$9.4 \times 10^{17}$  m (about 94 light years)

# Solar System & Nearby Stars

**Any Difficulties?**

**What will kids have difficulty with?**

# Astronomical Scale (1)

**Distance to the Crab Pulsar**  
(Spinning neutron star in constellation Orion)

**Distance to the Galactic Center of the Milky Way**

**Radius of Milky Way Galaxy**

**Distance to LCM – Large Magellanic Cloud**  
(A dwarf satellite galaxy of our Milky Way)

**Distance to Andromeda**  
(Largest galaxy in our Local Group)

# Astronomical Scale (2)

**Radius of Virgo Supercluster**  
(Our Local Group of galaxies rotates near outer edge)

**Distance to AGN 3C 273**  
(Sustained energy of a trillion suns)

**Radius of Observable Universe**

**Distance to GRB 990123**  
(Equal to the energy of a billion-billion suns)

# Astronomical Scale

- 9 volunteers please
- Arrange the red papers from smallest to largest.

# Astronomical Scale

Distance to the Crab Pulsar,  $7 \times 10^{19}$  m  
(Spinning neutron star in constellation Orion)

# Astronomical Scale

- Distance to the Galactic Center of the Milky Way
- $2.6 \times 10^{20}$  m

# Astronomical Scale

Milky Way Galaxy  
from center to edge = radius  
 $5 \times 10^{20}$  m

# Astronomical Scale

Distance to LCM – Large Magellanic Cloud  
(A dwarf satellite galaxy of our Milky Way)

$$1.8 \times 10^{21} \text{ m}$$

# Astronomical Scale

Distance to Andromeda  
(Largest galaxy in our Local Group)  
 $2.9 \times 10^{22}$  m

# Astronomical Scale

- Radius of Virgo Supercluster
- Our Local Group of galaxies rotates near outer edge
- $6 \times 10^{23}$  m

# Astronomical Scale

Distance to AGN 3C 273,  $7 \times 10^{25}$  m  
(Sustained energy of a trillion suns)

# Astronomical Scale

Distance to GRB 990123,  $1 \times 10^{26}$  m  
(Equal to the energy of a billion-billion suns)

GRB 990123: Optical Transient Discovery

4' x 4'

# Astronomical Scale

- Radius of Observable Universe
- $1.4 \times 10^{26}$  m
- About 14, 000,000,000 (14 billion) light years

# The Universe is a VERY Big Place

At least 14 billion light-years  
(or about 100,000,000,000,000,000,000,000,000  
kilometers)

It is full of very small & VERY BIG numbers!

Any Astronomical thoughts?

# Brainstorm Time

- 
- A red ruler with white markings and numbers from 1 to 20, positioned horizontally across the top of the slide.
- How can we use this in our science classroom?
    - Introductions and applications of scientific notation
    - Biology Lessons
    - Astronomy Lessons
    - Physics Lessons
    - ....

# Ordering Time

- Repeat the steps of the “Ordering Distance” activity
  - Place in order from short to long duration
  - One group reports
  - Discuss and review

# Ordering Time, FAST

- 
- A red ruler with white markings and numbers from 1 to 20, positioned horizontally across the top of the slide.
- There are 11 tabs in the FAST section.
  - We used 7 of them in the first EM ordering activity.
  - “fast” = periods of EM Radiation

# Ordering Time, Average

- There are 12 tabs in the Average section.
- “average” = 1 year or less of time

# Ordering Time, SLOW

- There are 13 tabs in the section.
- “slow” = 1 year or more of time

# Resources

- GLAST Education and Public Mission Website
  - <http://glast.sonoma.edu>
- Downloadable materials for this book (AND MORE):
  - <http://glast.sonoma.edu/teachers/teachers.html>
- More Great materials from TOPS:
  - <http://topscience.org/>

# Scientific Notation and tens

$$10000 = 1 \times 10^4$$

$$1000 = 1 \times 10^3$$

$$100 = 1 \times 10^2$$

$$10 = 1 \times 10^1$$

$$1 = 1 \times 10^0$$

$$0.1 = 1 \times 10^{-1}$$

$$0.01 = 1 \times 10^{-2}$$

$$0.001 = 1 \times 10^{-3}$$

$$0.0001 = 1 \times 10^{-4}$$

# How this works:

Standard notation

Scientific notation

56,000,000

$5.6 \times 10^7$

7 places to the left

0.0003099

$3.099 \times 10^{-4}$

4 places to the right
